Outline

- Sample customer engagement model
- Speedy SAN Scan takes picture of customer network
- Standoff SAN Detail diagnoses the network
- SAN website portal
- Suitable SAN Designer redesigns the network
- Conclusion: speedy, standoff, suitable customer benefit
- Acknowledgements and references
- Demonstration
- Questions and answers

Sample Customer Engagement

- Customer requests HP to upgrade pre-existing Storage Area Network
- HP collects network configuration with standoff SAN Scan
- HP analyzes the SAN Scan results with proprietary SAN Diagnostic package SAN Detail
- HP feeds the SAN Detail output into HP SAN Designer and enters data flow requirements
- HP SAN Designer redesigns new SAN for customer using patented HP Labs algorithms
- HP SAN Designer checks the design for potential problems
- HP orders and installs pre-checked upgrade

SAN Scan of Customer Network

- Minimal installation prerequisites
- Compatible with many customer SAN architectures
- Does not require the purchase of specific SAN management software licenses
- Ideal for use in the change control environments
- Gathers data from single standoff management node

Conclusion

- Speedy SAN Scan of customer network
- Standoff SAN Detail diagnoses
- SAN Designer redesigns suitable SAN for customer
- This is how HP services SANs with speedy, suitable, and standoff tools.
