Integrating J2EE and .NET: A Developer's Experience

Evelyn Hobson

Hewlett-Packard

evelyn_hobson@hp.com

Objectives

- Understand why interoperability is being done today at the web services layer

- Understand the pitfalls of using cross-platform web services

- Understand how J2EE and .NET implement web services

- Understand why you might use both J2EE and .NET web services

Key Learnings

- Web services can be written in either .NET or J2EE

- Interoperability between J2EE and .NET web services

  is highly desirable and is possible today

- Use common data types that can be easily serialized

- Learning a new language or paradigm might be needed
