

Smart Array Competitive Analysis

Lonnie Pope

Systems Manager, Product Development

ISS Server Storage

Part 2 of 3

What's new for smart array cluster

Selective Storage Presentation

Standard with 2 Port

Share the Smart Array Cluster Storage with multiple servers

4 port SCSI module option

Attach up to 4 direct attached servers

Attach two Smart Array controllers per server

Multipath option software

Ships standard with 4-Port Module

Failover between multiple paths to the servers in 2 node SCSI cluster or DAS configurations

Increases cluster fault tolerance and I/O performance over single path

4-Port Module Configuration Summary

2-node shared storage

4-node shared storage

Multi-path shared storage

multi-path cluster (S200)

- 1) Dynamic storage capacity using SSP (share 4TB between up to 4 servers)
- 2) Maintains simplicity & features of Smart Array
- 3) Higher levels of availability (protects from HBA & cable failures)
- 4) Increased IO performance over single path via static Load balancing.

4-port Shared Storage Module

Multi-path Software

Increased High Availability

Embedded Server RAID performance – case 3

Ultra3, BBWC, dual-channel

HP Proliant DL380 G3

5i Plus

Dell PowerEdge 2650

3D/i

Hp 5i plus vs Dell 3D/i

Max IO's

1 channel, RAID 5

HP 5i plus vs Dell 3D/i

OLTP8k

1 channel, RAID 5

HP 5i plus vs Dell 3D/i

64k random reads
1 channel, RAID 5

HP 5i plus vs Dell 3D/i

64k sequential reads

1 channel, RAID 5

HP 5i plus vs Dell 3D/i

64k sequential writes

1 channel, RAID 5

HP 5i plus vs Dell 3D/i

Max MB's

1 channel, RAID 5

Ultra320 – a performance glimpse

- U320 increases the bandwidth available to customers
- Smart Array continuity:
 - investment protection with backward compatibility to Ultra2 and Ultra3 interface speed
 - consistent manageability and configurations tools
- 64MB of DDR-RAM memory upgradeable to 128MB of total memory for code, transfer buffers, read and write cache
- Sequential read and write performance most improvement – almost double with less drives

Smart Array 642

- 6th generation U320 entry controller
- dual channel, 133MHz PCI-X array controller
- 64MB DDR-RAM, upgradeable to 128MB

BBWC64 MB BBWC Enabler

- transportable 64MB memory and battery module upgrade for the Smart Array 641/642 controllers

Competitor's U320 Controllers

■ U320 Server Embedded Controllers

- Dell PERC 4D/i – Integrated; 128 MB BBW Cache; LSI 1030 logic; PowerEdge 2600
- IBM ServeRAID-5i – Works with LSI 1030 chip set; RAID levels

■ U320 PCI RAID Controllers

- Adaptec
 - 2200S RAID Controller : Dual-channel, entry level: \$799.00
 - 39320D-R – 1 and 2 Channel variations. HostRAID
- Intel – SRCU42L RAID Controller: Dual –channel. \$475.00
- LSI MegaRAID Series:
 - MegaRAID SCSI 320 – 2 : Dual-channel
 - MegaRAID SCSI 320 – 1 : Single-channel
 - MegaRAID SCSI 320 – 0 : Zero-channel

■ External Storage

- Adaptec DuraStor 412R: Ultra320, 2U 12-bay
- AMI – 2U, 8 drive capable

- U320 Hard Drives
- 10K Hard Drives
 - Seagate 36 GB
 - Maxtor Atlas 36 GB
- 15K Hard Drives:
 - Seagate 18 GB/36 GB/ 72 GB
 - IBM 36 GB/ 72 GB

What does all this performance stuff mean?

- Mature Products like the Ultra-3 SA-5304 still among the best. Firmware revisions keep products efficient.
- Smart Array Cluster is strong performer and has write back cache (whereas leading competitor disables in cluster mode).
- 5i+ is top performing Ultra-3 embedded controller available.
- Early U320 products from HP show performance to be very competitive.
