# **Introduction to Application Integration (EAI) and HP Netaction's Process Manager**

**Most enterprises have invested heavily in point-product information systems, each of which is an island of incompatible information. In the brave new e-world of e-services and federated enterprises, it will be critical to automate the processes that create and use these systems' information. This session explains how to integrate several "legacy" systems with a combination of an EAI bus and HP Netaction's Process Manager.**

**You will learn:**

- 1. What EAI is**
- 2. How to use an EAI bus to integrate your legacy applications**
- 3. How to use HP Process Manager to add automation**
